Solartraders is the professional marketplace for the photovoltaic industry. We connect manufacturers, distributors and installers and facilitate international trades of solar panels, solar inverters and accessories. Daily updated prices and the largest selection of photovoltaic brands and offers are waiting for you.

The solar panels produce DC, Supercharger is done with DC. So I should be able to Charge my truck directly from the Solar panels if the strings were configured at the correct voltage. It makes no sense for me to first convert DC from the panels to AC with a solar inverter then use an AC charging unit to charge the truck. What you all say?
