The sprayed coating thickness is determined by the winding quality and is usually 0.014" - 0.016" (350 m - 400 m) but for some high class thin film capacitors, coatings may be thinner 0.010" - 0.012" (250 m - 300 m). The choice of coating depends on the joining technique; usually the coating is mainly zinc with the final 0.003" -
