

What happens if you throw a battery away?

Throwing batteries away can impact the safety of you and others, harm the environment, and is wasteful of metals that can be reused time and time again. The best and most convenient method of recycling batteries will differ depending on where you live. Different states, counties, and cities have different options for accessing recycling services.

Can old batteries be thrown away?

You should never throw away old batteries. Even after a battery has died, the compounds present in heavy metals are toxic, even in small concentrations. The majority of batteries include hazardous chemicals such as cadmium, lead, nickel, and mercury, while battery acid contains sulfuric acid.

What happens if you throw batteries out in the trash?

Throwing batteries out in the trash can be dangerous. Spent cells can spark and cause fires, or even explode. This can cause harm to you or your family, be a health hazard to those who have to handle your trash, or cause damage to your home and other equipment.

How do you dispose of a battery?

The EPA recommends sending alkaline and/or zinc-carbon batteries to local recycling centers for disposal, instead of throwing them away in the household trash. It's important to check with your community first to see if this is an option.

What happens if a battery dies?

When single-use batteries are dead, they must be replaced. Rechargeable batteries can be charged many times. You can use them over and over. They're found in cordless phones, smartphones and digital cameras. Cordless power tools and similar devices use them too. Batteries contain reactive chemicals and metals that generate electrical energy.

What happens if a battery is improperly disposed of?

When batteries are improperly disposed of, their hazardous chemicals and acids may leak into the environment and waterways. The metals in batteries may be burned at landfill sites, releasing fumes that evaporate into the air or combust into ash. This approach can harm the environment in the following ways:

Can You Throw Away Batteries? Some states allow you to throw away certain types of batteries, but that doesn't necessarily mean you should. Others have mandatory recycling regulations in effect, which prohibits throwing batteries out in the trash by law. You can check on the status of the law wherever you live on the [Call2Recycle](#) website.

Recycle your old batteries by first determining what type of battery you have, then using a service like

Call2Recycle, Earth911, or GreenerGadgets, to find a local recycling drop-off, pick-up, or mail-in program. There are many reasons you ...

To dispose of batteries, start by checking to see what kind of batteries they are. If they're alkaline batteries, you can throw them away or recycle them, unless your local government requires them to be disposed of at a designated facility. If they're rechargeable batteries or ...
