Capacitor networks or arrays are devices of two or more capacitors in a single surface, through-hole or chassis mount package. The capacitors may be isolated from each other or connected in a bussed circuit type. Single or multiple capacitance values range from 10 pf to 80 μ f and 5% to 20% tolerance. Dielectric materials include ceramic, metallized polymer and polypropylene in ...

Planar Capacitors are the fundamental building block for filtered connectors in Aerospace, Biomedical, Military, Satellite, Industrial and Communication electronics. Johanson offers NP0, X7R and MOV (Metal Oxide Varistor) Planar Arrays in standard and custom solutions to fit your needs (1 to 150 pins).

Identify the capacitance of the filter to operate in the correct frequencies
o Select the capacitance so that it doesn't interfere with designed signals
o Determine the type of filter (Notch or Broadband) that meets the frequency spectrum required in your application
o Choose optimum capacitance based on -3dB Cutoff Frequency of the ...

This white paper provides an overview of the filtering options available for phased arrays and explains how filtering in position 1 of a phased array, while a challenging task at higher frequencies, is not impossible as once believed. This paper also addresses how a solution for filtering at position 1 can minimize spectral noise

and improve ...

Smiths Interconnect uses monolithic ceramic capacitor array on both thick and thin film technology. Using a dry process to laminate the layers of X7R ceramic tape, Smiths Interconnect is capable of achieving capacitance values from 100pF to 100nF on the same array.
