What is car battery reconditioning?

Car battery reconditioning is the process of restoring a depleted car battery to its optimal performance through a systematic procedure. This step-by-step guide involves cleaning, replenishing electrolytes and recharging the battery to extend its lifespan and enhance its efficiency.

How to recondition a lead-acid battery?

Reconditioning a lead-acid battery involves several steps. First,you need to remove the battery from the device. Then,you should drain the battery completely and clean the terminals and the inside of the battery. After that,you need to prepare an electrolyte solution and fill the battery cells with it.

Who is BSI - battery solutions International Ltd?

Welcome to BSI - Battery Solutions International Ltd, Where we address the costly and environmentally harmful issue of electric batteries.

What happens if a reconditioned battery is left unused?

If the battery is left unused for long periods of time,it can lose its charge and become damaged. Here are some common mistakes to avoid when maintaining your reconditioned battery: Overcharging the battery can cause it to overheat and reduce its lifespan. Use a charger with an automatic shut-off feature to prevent overcharging.
