Conventional screening machines like ultrasonics and traditional vibratory screeners have difficulty screening powders below 74/44 microns. The Elcan Hi-Sifter screening equipment can screen wet and dry materials to as fine as 10 microns on an industrial scale with high throughput rates and yields over 98%.

GKM's screening machines are successfully used both, in the production of the individual raw materials for batteries and in recycling (pre-shredded materials). For the production of batteries, the individual metallic raw materials such as, amongst others lithium, cobalt, graphite, nickel and manganese must be dedusted, fractionated ...
