For the 12V drill the most useful cheap solution is to run a long fairly thick lead, and fit a couple of chunky crocodile clips. Then attach to a car battery and use for automotive work. I did that to a (formerly NiCd) 12V drill and it was quite handy for car jobs when it wasn't easy to run mains to where I was parked.

If you're in search of a cordless drill driver and battery combo that can do it all, and you don't already have a preferred tool brand, then we strongly urge you to consider the Kobalt XTR 24-volt 1/2-in. This model shines in our two most important testing metrics: drilling and driving. It was able to cut a 5-inch hole in our solid core testing door in just 17 seconds, and it ...

A good drill and battery platform will make every part of this kit feel and perform much better. We used the drill to drive a series of 3-1/2 inch screws into our test piece of 4" x 4". Speed was adequate and the drill seemed to ...
