

Battery information garbled

What if my battery output is garbled?

Issue: Garbled output. Question marks,negative or missing values. Fix: Try "jump starting" the battery by connecting the VCC (+12.6V) and GND wires. Reconnect the battery. If the output is still garbled,give it a bit of time and try again.

What's new in battery wear level & battery health?

Changed the 'Battery Wear Level' caption to 'Battery Health', which is the right term to use (Battery Wear Level is the opposite). Added option to display the battery capacity in mAh (milliampere-hour). This option works only if the voltage of the battery is available. Added 'Always On Top' option.

What information is displayed on a battery?

The displayed battery information includes the battery name, manufacture name, serial number, manufacture date, power state (charging/discharging), current battery capacity, full charged capacity, voltage, charge/discharge rate, and more...

How do I export battery information?

In both view modes,you can export the battery information into csv/tab-delimited/html/xml file,by using the 'Save Selected Items' option (Ctrl+S). You can also copy the information into the clipboard,and then paste it into Excel or other spreadsheet application. Battery Name: The name of your battery.

An accurate battery test relies upon the correct criteria entered into the diagnostic tester. If incomplete or inaccurate information is inputted, the result won't be good. As the saying goes in computer programming, "Garbage in, garbage out." These test decisions indicate a healthy battery, even if that might not be right.
