

Battery is not durable after turning on the power

Can a dead battery cause power problems?

Yes, a dead battery can cause power issues even if you are using a charger as power. I would open the unit and unplug the affected battery. You should be able to use the laptop with the internal battery unplugged and the ac adapter/charger to power it, but as with a desktop when you unplug the ac adapter/charger from the unit you will lose power.

Why does my notebook not start with battery connected?

If the notebook won't start with the battery connected and the battery won't charge, it should be the first thing in the troubleshooting tree to try. If that does not work, it means that the power connector cable may have failed. There is a remove replace/video for that on the link I provided earlier. It is a simple replacement.

Why is my battery not charging?

And the answers you see saying it is a battery is actually usually the problem. Older batteries say they hold a certain % of a charge, but give false readings. Additionally if the new battery you bought was aftermarket rather than OEM it could also give you the same problem. You can also try the following...

How much does a laptop battery decrease after a day?

Every time I shut down the computer and turn it back on after a day, the battery level decreases by about 5%. I'm sure that the computer is shut down, not in sleep or hibernate. I removed the battery from laptop and after inserting it, the battery percentage does not change.

Why does a battery have more capacity when it cools off?

Batteries are strange (and complicated) things. They have more capacity when warmer, because the chemical processes are more efficient. So, if the battery was measured while the machine was ON, then it has more capacity than the next day, when the battery cools off.

Can a bunk battery cause a no power problem?

Although they typically die slowly and with diminishing power on time, a bunk battery could cause a no-power problem. In case of a failed battery, replace it with a new one. Disconnect the battery and try to power it on. Most Dell laptops will boot without it. If it powers up, the battery is likely your issue.

If you find your battery is in good condition after testing it, your car's battery cables may be to blame. #2: Your Car Battery's Terminals Are Corroded Corrosion on the battery's terminals is one of the most common issues for a car that won't start. When too much corrosion builds up on the terminals, it can prevent the delivery of power from your battery to ...
