Checked the battery health on this one and it says: "Important Battery Message - Your battery's health is significantly degraded. An Apple Authorised Service Provider can replace the battery to restore full performance and capacity"; Below that, maximum capacity shows 87%.

How long does a laptop battery last?

The average laptop battery is good for around 400 recharged cycles. After that, it starts to lose its capacity to hold a charge. Refer to the article [Testing and Calibrating the Battery \(Windows\)](#) Learn how to get the most service and life from your HP notebook battery by following these industry-wide suggested best practices.

What if my battery level goes down to 20%?

In order to slow down that inevitable process I would suggest you to: If your battery level goes down to 20%, turn on "low power mode"; (reduces display brightness, optimizes device performance, minimizes system animations, etc.) to avoid to completely drain your battery (0%).

How often should I charge my battery?

Charging it once to 100% and using it on AC for a couple days may actually cause less wear on the battery than constantly cycling it between 25%-75% for those couple days. But if you're always using it on battery, then just take care not to discharge it completely, and try not to charge it completely if you don't need to.

Is the 82% battery capacity enough to get me through the day, or will I have to get a battery replacement as soon as I get the phone? I've checked videos and reviews, and some of them said the battery is piss-poor, even out of the box, while some said it's more than enough to get me through the day if I don't use it for gaming and ...
