

What is the value of ceramic capacitors?

The value of capacitance is 1200 uF(microfarad). The value of maximum voltage is 63 V DC. The value of tolerance is $\pm 20\%$. The value of temperature coefficient is -40 to $+105^{\circ}\text{C}$. The fig 2 (d) We will show a solved example and table (see fig 3) below to show how to read the value of ceramic capacitors

How to calculate capacitance of ceramic capacitor?

The following capacitor value calculator calculates the values of capacitance for ceramic capacitors. Just put the capacitor code marking such as "103" and click on calculate. The result will show the value of capacitance of ceramic capacitor in uF (microfarad = 1×10^{-6}),nF (nano-farad = 1×10^{-9}) or pF (picofarad = 1×10^{-12}).

What is the numbering system for ceramic capacitors?

The numbering system is easy to use,if you remember it is based on picofarads,not microfarads. If a ceramic capacitor has three digits - ABC,then the value would be $AB \times 10^C$ Pico Farad. If ABC is 104 then the digit 104 means $10 \times 10^4 \text{pF} = 100000 \text{pF} = 100 \text{nF} = 0.1 \mu\text{F}$.
