

## Does the battery need to be replenished now

Should I replace my car battery?

If your battery is starting to struggle and hasn't been replaced in a few years, don't take any risks. Vehicle batteries are relatively inexpensive, and the small cost of a replacement is worth avoiding the stress & inconvenience of a roadside breakdown. Here's some more information about what battery you need for your car.

Should I replace my car battery if I'm over 4 years old?

If your battery is nearing or over the 4 year mark, it would make sense to replace the battery as part of your standard maintenance cycle anyway. Putting it on a slow charge overnight / over a day wouldn't be a bad idea, at any rate, even if you're over the 4 year mark... might as well try and eke out as much life from the battery as you can.

How often should a car battery be replaced?

Testing a battery regularly can help to ensure you don't end up stranded or on the side of the road. How Often Do Car Batteries Need to Be Replaced? No battery can last forever. General wisdom says you should replace your car battery about every three years, but you could end up needing a replacement sooner.

Why is battery maintenance so important?

When you add in that extreme temperatures can play havoc with your battery, a lack of battery maintenance can lead to a shorter lifespan, and batteries will automatically lose some charge over time anyway, it's no surprise that battery failures are widely acknowledged as the number one cause of breakdowns in the UK.

Should I buy a new battery?

It's always a good idea to purchase as a newer battery as possible because as they stay at the dealer's shelves, they slowly discharge. As they are discharging and without being charged again, plates start to oxidize, making the battery lose its capacity.

How long does a lead acid battery last?

Most will just jump start the car, and hope for the best from alternator charging. That should work too, but a full charge with a charger is the best option. A reasonable answer depends on how old the battery is. The expected lifespan of a lead acid battery is about 4 years.
