

What does battery mean?

Get a quick, free translation! BATTERY definition: 1. a device that produces electricity to provide power for electronic devices, cars, etc.: 2. a.... Learn more.

What is a battery used for?

Batteries come in many shapes and sizes, from miniature cells used to power hearing aids and wristwatches to, at the largest extreme, huge battery banks the size of rooms that provide standby or emergency power for telephone exchanges and computer data centers.

What is an example of a primary battery?

[3] Primary (single-use or "disposable") batteries are used once and discarded, as the electrode materials are irreversibly changed during discharge; a common example is the alkaline battery used for flashlights and a multitude of portable electronic devices.

Is a battery a liquid or solid?

The electrolyte can be liquid or solid. A battery is called a wet cell or dry cell battery, depending on the type of electrolyte. The chemical reactions that occur in a battery are exothermic reactions. This type of reaction makes heat. For example, if you leave your laptop on for a long time, and then touch the battery, it will be warm or hot.

What is a rechargeable battery?

Rechargeable batteries are (re)charged by applying electric current, which reverses the chemical reactions that occur during discharge/use. Devices to supply the appropriate current are called chargers. The oldest form of rechargeable battery is the lead-acid battery, which are widely used in automotive and boating applications.

What is a battery's capacity?

A battery's capacity is the amount of electric charge it can deliver at a voltage that does not drop below the specified terminal voltage. The more electrode material contained in the cell the greater its capacity. A small cell has less capacity than a larger cell with the same chemistry, although they develop the same open-circuit voltage. [49]

Many translated example sentences containing "batterie" - English-French dictionary and search engine for English translations.

battery, car battery n (for car"s lights, etc.) (d"une voiture) batterie nf : The battery died because Wilma left the headlights on all night. La batterie était à plat car Wilma avait laissé les phares allumés toute la nuit. battery n: uncountable (law: inflicting ...

A battery converts chemical energy into electrical energy by a chemical reaction. Usually the chemicals are kept inside the battery. It is used in a circuit to power other components. A battery produces direct current (DC) electricity (electricity that flows in one direction, and does not switch back and forth).

An electric battery is a source of electric power consisting of one or more electrochemical cells with external connections [1] for powering electrical devices. When a battery is supplying power, its positive terminal is the cathode and its negative terminal is the anode. [2] The terminal marked negative is the source of electrons.

A battery converts chemical energy into electrical energy by a chemical reaction. Usually the chemicals are kept inside the battery. It is used in a circuit to power other components. A battery produces direct current (DC) electricity (electricity ...
