How to maintain and replace batteries

How do you replace a battery?

Secure the new battery to the bracket and grease the terminals. Place the new battery in the battery tray and secure it to the bracket. Simply reverse the process you used to remove the battery from the bracket. Then, coat each of the terminals in a thin layer of lithium grease to prevent corrosion.

How do you keep a battery from getting stuck?

Naturally, you want to avoid getting stuck by a dead battery, so there are many steps you can take to keep your battery in good working order. Clean the battery regularly, tighten the hold-down, use insulation to protect it from the cold, and maintain its fluid levels.

Why is battery maintenance so important?

Car,truck and SUV batteries are more stressed than ever before. Whether it's extreme temperatures, or the need for a constant power supply from increasingly complicated on-board electronics, battery maintenance is just as important as a regular tune-up, to get the most out of your vehicle.

Do I need to change my car battery?

If you have ever turned the ignition or tried to start your vehicle and been greeted by silence, then you may need to change the battery. Starting problems are often caused by a flat or dead car battery. Thankfully, replacing a faulty battery is a simple task. And you can do it yourself or use the RAC battery fitting service.

How do you keep a battery from dying in the Cold?

Wrap the battery in a battery heaterto prevent damage from the cold. If you live in a cold climate or winter is on its way, a battery heater can prevent your battery from dying in the cold. These are basically jackets that fit over the battery and keep it warm.
