

Are rechargeable batteries good for the environment?

There's no doubt about it: using rechargeable batteries reduces waste and is good for the environment. However, if saving money is your primary reason to make the switch, don't run out and replace every single AA, AAA, C and D battery in your home with rechargeable versions. Here's why.

Are rechargeable batteries a good investment?

Mr. Electric would like to take a look at rechargeable batteries and help you decide if they're a good investment. For this to be the case, purchasing rechargeable batteries and a charger needs to save you money compared to going through regular batteries.

Are rechargeable batteries worth it?

Batteries power many low current-draw devices, including wall clocks, smoke detectors, radios, thermostats, emergency flashlights, and even your oft-used wireless keyboard and mouse. These devices consume electricity at such a low rate that it would take years to reach the payback period if you used rechargeable batteries.

Where can I buy a rechargeable battery?

And then there's Energizer, the rechargeables my dad stocked up on as soon as they originally became available. They are by far the easiest to source locally. A charger + four batteries, plus two more 4-packs would run \$38 at Target with the Pro charger, or \$36 with the value charger at Walmart, on the shelf.

How much money can you save with a rechargeable battery?

Over five years, you'll have saved a minimum of \$64 if you replace four batteries each month. Of course, more frequent battery users will see much bigger savings of \$200+ in the same time period. If you're ready to move away from disposable batteries, make the switch to rechargeable batteries as smooth as possible by following these tips:

Do you need rechargeable batteries?

Of course, you don't have to use rechargeable batteries in all of your battery-powered electronics. If you have batteries in a wall clock or TV remote that you only have to replace once every year or two, it may be cheaper to stick to the \$0.25-\$0.75 per battery cost as opposed to investing in rechargeable batteries.

There's no doubt about it: using rechargeable batteries reduces waste and is good for the environment. However, if saving money is your primary reason to make the switch, don't run out and replace every single AA, AAA, C and D battery in your home with rechargeable versions. Here's why.

Rechargeable batteries are ultimately better for the environment but only if used for their entire lifespans. Whether you're considering making the switch to rechargeable batteries to save money or to help the

environment, you'll ultimately achieve your goal by investing in a quality setup and using the rechargeables for as long as possible.
