What is a water cooled capacitor?

Water cooled capacitors are special power capacitors designed for tuning induction furnace and heating circuits. The individual production lines listed in the catalogue cover a wide range of capacitances, powers and frequencies in several different designs.

What are the different types of capacitor banks?

The capacitors are available in Single and Three-Phase design for voltages up to 24kV and 1000kVar, and can be supplied with pressure sensors operating from 230V/50Hz supply voltage. Capacitor banks type SCB and ACB are used for individual or central power factor correction in medium voltage power networks.

What is a capacitor switching contactor k3-k?

Contactors K3-K are suitable for switching low-inductive and low loss capacitors in capacitor banks (IEC 70 and 831, VDE 0560) without and with reactors. Capacitor switching contactors are fitted with early make contacts and damping resistors, to reduce the value of making current $< 70 \times I_e$.
