

Any surplus electricity generated during sunny periods is stored and can be fed back to the farm consumers at a later time. Load peaks are also easily prevented. In summary, this means that depending on the location, livestock producers can cover up to 80 percent of their farms' energy demand, reducing energy costs significantly and ...

There are three main types of battery energisers available which we'd recommend for using to secure livestock in the UK. Firstly there are 6v energisers which are usually run from 4 D cell batteries (like the ones used for torches). Each of these batteries produces 1.5v giving the 6v supply to the fencer.
