What are charging piles for new energy vehicles?

As one of the new infrastructures, charging piles for new energy vehicles are different from the traditional charging piles. The "new" here means new digital technology which is an organic integration between charging piles and communication, cloud computing, intelligent power grid and IoV technology.

What is a DC charging pile for new energy electric vehicles?

This paper introduces a DC charging pile for new energy electric vehicles. The DC charging pile can expand the charging power through multiple modular charging units in parallel to improve the charging speed. Each charging unit includes Vienna rectifier, DC transformer, and DC converter.

Why are charging piles important?

Charging piles are of great significance to developing new energy vehicles, and they are also an important part of the emerging digital economy such as intelligent traffic and intelligent energy. The State Grid Corporation of China (SGCC) is taking an active role in the development of new energy vehicles.

What is a charging pile gateway?

The gateways meet the demand of all charging pile communication scenarios and collect real-time electricity consumption information of charging piles so as to realize information interaction on charging and discharging between the power grid and charging piles, as well as meet the demand on charging service expansion.

What is a DC charging pile?

This DC charging pile and its control technology provide some technical guarantee for the application of new energy electric vehicles. In the future, the DC charging piles with higher power level, high frequency, high efficiency, and high redundancy features will be studied.

What are the advantages of DC charging pile?

The advantage of DC charging pile is that the charging voltage and current can be adjusted in real time, and the charging time can be significantly shortened when the charging current are large, which is a more widely used charging method at present.

Smart photovoltaic energy storage charging pile is a new type of energy management mode, which is of great significance to promoting the development of new energy, optimizing the energy structure, and improving the reliability and sustainable development of the power grid.

Application: ISO 15118 is used for communication between electric vehicles (EVs) and charging stations. It supports smart charging, Plug and Charge (PnC) functionality, and vehicle-to-grid (V2G) energy transfer. This protocol ensures the security and efficiency of both AC and DC charging sessions. OCPP (Open Charge Point
