Why do construction sites need battery units?

With limited energy supply from the grid and energy demands for equipment and electric vehicles rising, construction sites are facing a challenge to meet their energy needs. Battery units can solve the problem by delivering the high power requested by tower cranes and heavy machinery, while also storing energy during low demand to be used later.

How do I charge a power tool battery?

It is as simple as placing your tool charger in the battery bank, charge the batteries up knowing that they are safe and secure. Don't forget we also offer training courses through HSS Training. View details of the courses here. Hiring dates... This site locker has been designed to provide a safer environment for charging power tool batteries.

What safety equipment do I need for a battery charging site?

You are required to wear safety footwear to BS EN 345 for toe protection with this item. Gauntlets, PVC, cotton or rigger gloves are required with this item for hand protection. Protect against falling objects. Compulsory on site. The Battery Charging Site Locker.

How to reduce energy consumption on construction sites?

To lower the energy demand and to save on cost, smart timers and schedules per circuit can eliminate the high excess energy consumption on construction sites. With the rise of electric vehicles, a charging solution on site is becoming a necessity. Charging EVs adds significantly to the already high energy load, which must be actively balanced.

Why do you need a charging solution on site?

With the rise of electric vehicles, a charging solution on site is becoming a necessity. Charging EVs adds significantly to the already high energy load, which must be actively balanced. The energy platform puts you in control while making energy management easy.
