

What is a solar buyback plan?

A solar buyback plan allows you to send excess solar power back to the grid. The net metering system monitors how much energy you consume from the utility and how much renewable energy you feed onto the grid. Excess solar power is then counted against your energy use and at the end of the month, there are two possible scenarios:

How much does a solar buyback cost?

For most months, customers will see effective prices range from \$0.01 and \$0.10 per kWh. The price range tends to be lower in the winter and higher in the summer. To see the historical solar buyback rates paid to customers, please view our solar buyback history page. Why is the buyback price different from the price I pay for consumption?

Does my residential electricity plan include solar buyback?

All of our residential electricity plans include solar buyback so you can choose the electricity plan that best meets your household needs, and still earn solar buyback credits. Our solar buyback allows you to earn credits each month for the surplus generation your panels create that is returned to the grid.

What are buy-back rate schemes for grid-connected photovoltaic power systems?

The existing buy-back rate schemes for grid-connected photovoltaic power systems are classified and compared with the energy price from conventional energy systems. The situation in the participating countries is described according to the identified buy-back rate schemes.
