

What is the battery production batch number

What is a battery production code?

The production code, also known as the date code, is a string of letters and numbers printed on the battery. This code is typically located on the top or side of the battery and is used to indicate when the battery was manufactured. To read the battery production code, you need to understand the format and meaning behind the different characters.

What is a production batch code?

In addition to the ship date code and manufacturing date code, some manufacturers may also include a production batch code in their battery coding system. This code helps in identifying the specific batch or lot to which the battery belongs. It is useful for quality control purposes and in the event of a product recall.

How do you know if a battery has a manufacturing code?

The manufacturing code for batteries can typically be found on the battery itself or on its packaging. It is usually a combination of letters and numbers that indicate the date of production. By decoding this code, you can determine when the battery was manufactured. What does the battery expiration date code mean?

What is a manufacturing date code on a battery?

The manufacturing date code on a battery provides information about the date it was produced. This code is typically a combination of letters and numbers that signify the manufacturing plant and the date of production. By checking the manufacturing date code, you can determine how fresh or old the battery is.

Does a battery have a manufacture date?

Yes, there is a manufacture date on batteries. The date is stamped on the top of the battery and is almost always the first number and first letter. The first number is the month and the letter is the year. For example, if the code is 3L, the battery was made in March of 2013. If the code is 11J, the battery was made in November of 2010.

What is a battery date code chart?

The battery date code chart is a tool that allows you to determine the date of manufacture for a given battery. The date code is typically stamped on the battery itself, and can be used to determine the age of the battery.

Battery codes typically comprise a letter and a number. The letter represents the month of manufacture, while the number denotes the year. This combination allows you to determine the exact date of manufacture, ...

Battery date codes are alphanumeric characters indicating the manufacturing date of batteries. Understanding these codes can extend battery life and ensure safety. Techniques for deciphering different types of battery ...

What is the battery production batch number

For each production cycle the same batch number is used. This way the manufacturer can know which batch is spoiled if any one item of a batch is spoiled. For example you buy a packet of cheese. When you open the ...

A battery ship date code is a specific series of numbers and letters that indicate the date of manufacturing or production for a battery. This code usually consists of a combination of letters and numbers, which can be decoded to determine important information about the battery, such as its expiration date and manufacturing location.

All our batteries include serial numbers for manufacturing traceability and date codes that indicate when the battery was manufactured. For NorthStar® branded batteries, the 12-digit, alpha-numeric serial number is located on the top and back of the battery.

What is a lot number? A lot number is a unique identifier assigned to a batch of items. Lot numbers are used to track items throughout the manufacturing process and can be used to identify recalled items or products with defects.
