Capacitors are used in a wide range of applications,from home appliances to industrial equipment.

Who makes optimal power capacitors?

CDE,founded in Liberty,SC in 1909 is a manufacturer of optimal power capacitors. The company's product portfolio includes electrolytic capacitors,mica capacitors,AC film capacitors,DC film capacitors and Power Factor Correction Capacitors.

Why does a capacitor store a charge between two electrodes?

A capacitor is a component with a dielectric between two metal electrodes. When a DC voltage is applied between the two electrodes of a capacitor,an electric charge is stored in the electrodes because it cannot exceed the dielectric. The stored charge initially behaves as if there is apparent continuity between the two poles.
