

What types of car batteries does Canadian energy offer?

Canadian Energy offers three different types of car batteries to the general public. The first option is a traditional flooded battery which serves as our base-level starting battery. If you want to upgrade from this entry-level battery, we recommend our Canada Proof MIXTECH line, which offers better life expectancy.

Where can I buy car batteries in Canada?

You can also browse through an extensive selection of batteries and other automotive-related products on NAPACanada.com. To be matched with items guaranteed to fit, input your vehicle details in the top left corner of the website.

What type of battery is best for a car?

Standard lead-acid batteries can lose up to 20% capacity in the cold. If the temperature goes below -30C, this loss can drop to 50%. So, if you're looking for a dependable energy source to get you through the winter, an AGM battery is your best option for a gas-powered vehicle, and lithium-ion is ideal for electric vehicles.

Which battery is best for winter?

Of the four types we've outlined, AGM and lithium batteries are the best at handling extreme temperatures. AGM batteries have a higher CAA rating than most other batteries, helping them withstand winter weather. They have a low self-discharge rate and can be stored for long periods of time without needing to be charged.

Do Canadians recycle Double-A batteries?

Double-A batteries are among the most commonly used -- and disposed of -- in Canadian households. According to Call2Recycle, the not-for-profit that manages this type of waste, Canadians recycled 4.1 million kilograms of batteries in 2020.

Do batteries rank better than other brands?

Ranking brands is different from ranking batteries, of course, and it turns out to be a lot more complicated. You cannot necessarily trust that every battery made by one brand is automatically better than every comparable battery from any other given brand.
